Specification criteria.

When analysing a product use these terms to judge or assess the object.

**Form**
Why is the product shaped or styled as it is?

**Function**
What is the product for?

**User requirements**
What makes the product attractive to potential users?

**Performance requirements**
What does the product need to do and how can this be achieved technically?

**Materials and component requirements**
What does the product need to do and how can this be achieved technically?

**Scale of production and cost**
How does the design allow for scale of production? What do you need to consider to determine cost?

**Sustainability**
How does the design take environmental consideration into account?
